

# Our sustainability strategy

A POSITIVE IMPACT FOR LOCAL ECONOMIES

ENSURING  
**RESPONSIBLE PRACTICES**

We support ethical and fair practices throughout our value chain

ACTING FOR  
**PEOPLE**

We are a responsible employer and guarantee a healthy, safe and attractive work environment

COMMITTING FOR OUR  
**THIRD PARTIES**

We strengthen the dialogue with our stakeholders and the positive spinoffs on our ecosystem and our anchor territories

PRESERVING THE  
**PLANET**

We promote innovative and sustainable logistics solutions geared towards respect for environment

THE PROCESS OF ENVIRONMENTAL  
CERTIFICATION OF TERMINALS ESTABLISHED BY AGL

## GREEN TERMINAL, A FOREFRONT LABEL FROM AGL

As a responsible and committed player, AGL invests each year in large-scale port projects, mainly in Africa but also in Asia and America. These projects are intended to support the growth of local economies.

### Green Terminal: Eight basic pillars

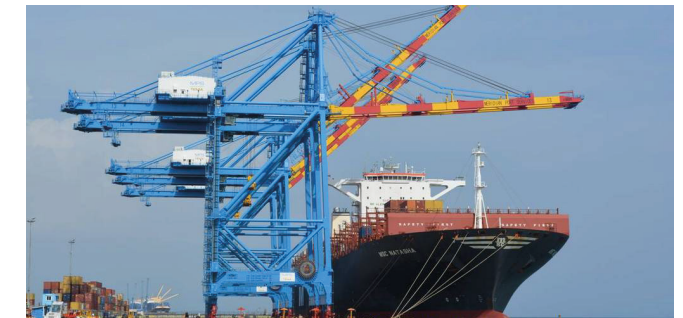

## THE CHAMPIONS OF ENERGY PERFORMANCE

Launched in June 2021, the Green Terminal standard aims to contribute to reducing the carbon footprint of our port activities.

### Meridian Port Services (MPS) in Ghana

Meridian Port Services (MPS) has been engaged in expansion works between 2020 and 2022. It has reduced greenhouse gas emissions by 8.3%, making it one of the most energy-efficient entities. In terms of the volumes handled, its carbon intensity is around 6.3 kg CO2 eq/TEU for the 2022 financial year compared to 7.6 kg CO2 eq/TEU for the 2020 financial year.

Since its launch, 11 concessions have been certified:

- Meridian Port Services (MPS) in Ghana
- Bénin Terminal
- Abidjan Terminal
- Dakar Terminal
- Kribi Conteneurs Terminal (KCT)
- Conakry Terminal
- Owendo Container Terminal (OCT) in Gabon
- Terminal Roulier d'Abidjan (TERRA)
- Freetown Terminal
- Côte d'Ivoire Terminal
- Timor Port.

### Timor Ports in Timor Leste

In Timor Leste, where AGL started the activities of the Tibar Bay deepwater port in 2022, environmental studies initiated with the assistance of the World Bank have served to determine the offsetting measures to be implemented in order to restore an area of mangrove while increasing its surface area and preserving marine fauna by setting up a hatchery to protect turtles. In 2019, this project was voted the best public-private partnership in Asia-Pacific by IJGlobal.

Olivier De Noray  
PORTS &  
TERMINALS  
CEO

« The Green Terminal certification is speeding up our energy transition projects. This approach strengthens our investments in collaborative digital platforms, decongesting port cities, and improving services to landlocked areas. Of course, we are contributing intermodal solutions to this Green Terminal certification, in order to reduce urban congestion, streamline freight transport and reduce environmental impact. »

Bureau Veritas is responsible for carrying out audits based on the Green Terminal standard in order to assess the performance of the port terminals operated by AGL.
